

We have been advised by Councillor Wong-Tam's office that Toronto Urban Forestry are planning a gypsy moth aerial spray of *Bacillus thuringiensis* sub-species

*kurstaki*

(

*Btk*

) for Moore Park and 10 other locations within Toronto in 2013. This is in response to a rapid build-up of moth egg masses over the last six months.

The aerial spray is likely to occur between May 15 and June 2 and would be scheduled between 5 am and 7:30 am in order to minimize the disruption. Urban Forestry will be notifying affected residents through various means over the next few weeks including the delivery of notices, signage, website information and media releases.
